

IAP Translations Format and Locales

The following document illustrates the requirements for implementing IAP translations with nowStudio.

Required Format

You can provide us with the IAP translations based on the following format.

```
<locale-tag>: <value>
```

Example -

Display Title -

```
en-US: Sample Display Title
ja-JP: 表示タイトル例
```

Description -

```
en-US: Sample Description text
ja-JP: サンプル説明テキスト
```

Explanation-

- Each locale tag and value should be separated by a (:) (colon)
- Each locale tag should be separated by a new line instead of spaces or commas.
- The translations will be displayed only for the added locales. All other locales will be served with English (**Default**) content.
 - If you haven't provided any English content, we will consider the first added locale as default.
- Only the below-mentioned locale tags are supported.

Supported Locales

S.no.	Country	Locale Tag
	North America	
1.	Canada	en-CA
2.	United States	en-US
